

# Sistemas de Trazabilidad para el sector Forestal

Martín de la Serna

la empresa

- founded in 2004
- corporate headquarters near Oxford, United Kingdom
- support offices in Malaysia, France, USA, and Indonesia.
- developed and deployed the unique software platform, CI World™:
  - chain of custody
  - asset tracking
  - process improvement
  - resource mapping

## forestry / timber

-  Forest Resources Mapping
-  Timber Chain of Custody
-  Process Control

## agribusiness / food

-  foodstuffs Chain of Custody
-  food Storage Management
-  Process Control

# Solución para la Cadena de Custodia

- wood origin verification, complete visibility of supply chain impossible with **paper based systems**.
- lacking back to stump traceability
- Inventory management difficult with extended supply chains
- recovery optimization
- legislative imperatives driving change:
  - EU initiatives: FLEGT, UK legislation
  - US initiatives: Lacey Act
- **MARKETS DRIVING CHANGE**

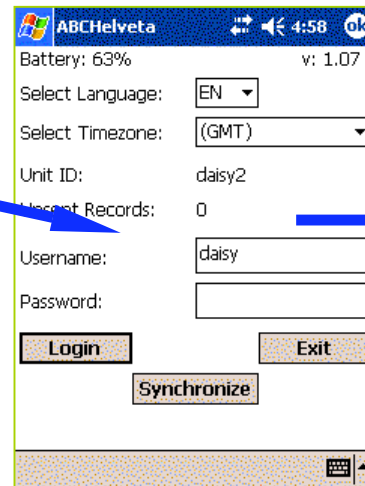

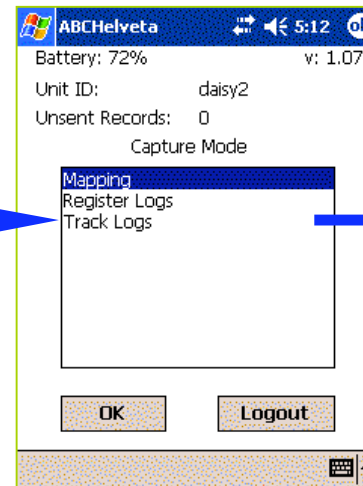

- ruggedised device (shockproof, waterproof) for field data collection at all points in the chain of custody.
- runs CI Mobile™ application on Windows™ Mobile platform

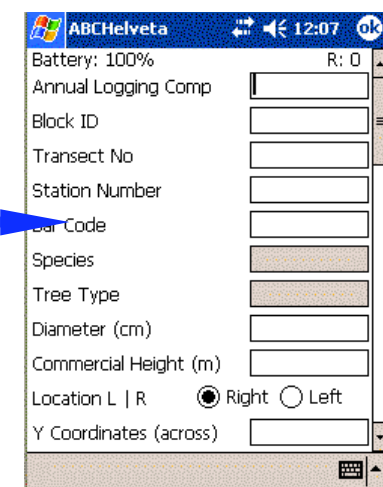

Integrated GPS, RFID  
reader, Barcode Scanner

- ## The Solution

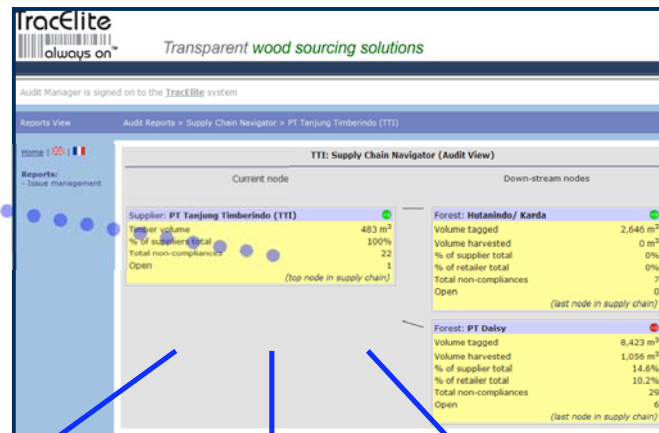

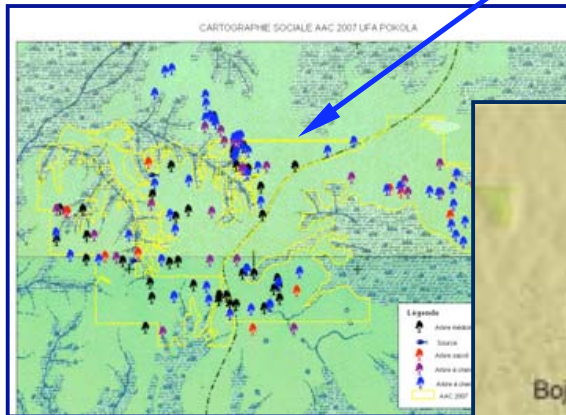

# CI Earth demo

## Reporting

- rapid, accurate mapping of forest resources.
- automated physical output maps to GIS applications such as ArcView™, Google Earth™, etc.
- enables accelerated harvest planning, license application and renewal, pre-harvest tagging of timber stocks

ArcView™

Google Earth™

## Reporting

- flexible, configurable report outputs
- sort and report data by region, species, size, proximity to transport facilities
- link inventory planning to customer order backlog to optimize workflow.

- wood origin verification, complete visibility of supply chain impossible with paper based systems.
- configurable reporting and traceability for timber supply chains
- increased recovery in factory and forest
- access to premium markets
- regulatory supervision and control
- traceability from forest to consumer
- efficient resource mapping, planning, and management
